Work Details

Specialist Comments to Customer	Water level is good.the outflow is not blocked by any debris. The water clarity is okay it could be a little clearer but this could be due to rain from last week. There is some erosion around the edge of the lake and quite a bit of sedimentation on the bottom of the lake. No algae or aquatic vegetation was observed. There were quite a few turtles around I was unable to get close enough to see if they were snapping turtles or not no bever activity was observed. The fish that I was able to see looked to be healthy.	Prepared By	Johnathon Wilkes
